Designed by a carpenter with 25 years experience, the innovative VETO PRO PAC Model XL is a rugged and weatherproof toolbag that keeps tools organized, protected, and easy to find. The bag is based on newly patented technology which uses a fixed center panel with a hinged handle which allows you to store tools vertically, making it easy to identify and access your tools while maximizing storage space. Each Model XL has two separates tool bays, one on each side of the center divider. Altogether, there are 64 pockets ranging from 3" to 8" deep for storing tools as long as shanked screwdrivers and chisels, to smaller items like chalk boxes and bits. Larger items can be stored at the bottom of each bay and 6 zippered pockets allow for storage of additional materials. The body fabric is made from 1800 Denier, which is PVC-impregnated to make it weather-proof, and carries with it a lifetime "built to last guarantee." In addition, the bottom of the tool bag is waterproof and made from 3mm thick polypropylene and the handle features a substantial over molded-ergonomic grip that makes carrying a full payload comfortable (a padded shoulder strap is also included).
